## *Security Monitoring & Analysis*

### **The Right Security Solutions For Your Business**

One of the challenges that every business faces is protecting the business and its assets. Protection can be external physical security measures such as locks and alarms, or internal logical security measures such as procedures controlling access to sensitive company information. Whatever the size and nature of the business there is always something of value that requires securing. In today's business world most companies rely on Information Technology for some function of their business. As with other areas of the business, IT requires securing both physically and logically.

The targeting of data through IT networks and systems is not just restricted to enterprise businesses with 'high value data'. According to studies, 87% of small/medium businesses have experienced a security breach in the last 12 months, up from 56% in 2005. Approximately 33% of small/medium businesses experienced some business disruption due to security incidents. The source of these security incidents isn't always external, law enforcement reports indicate that internal attacks occur almost as often as external attacks, therefore IT security has to focus on internal network security as much as perimeter defense. Now there is another element for some businesses to consider, regulatory compliance. Depending on the nature or location of your business, legal regulations may apply. So for some IT security is no longer a choice, but for all it should be a priority.

### **Security Monitoring & Analysis Services**

P4 Performance Management has a solution for customers who want to apply the same security solutions used by enterprise businesses and governments but at a cost that fits their budget. The P4secure<sup>SM</sup> service provides a suite of security solutions tailored to your needs and packaged in an à la carte selection to enable business managers to select the services they need, as they need them. P4secure<sup>SM</sup> features innovative professional services consultancy provided by experienced, certified P4 Security Solution experts and backed by our Global Security Operations Center (GSOC<sup>SM</sup>). Our solutions offer customers of all sizes, enterprise grade security solutions that meet your business needs.

## Service Offering

Our P4secure<sup>SM</sup> Security Monitoring and Analysis Service provides the ultimate level in protection. The service provides 24/7 monitoring and analysis of your IT infrastructure to identify and mitigate the possibility of internal or external attack. P4's Global Security Operations Center (GSOC<sup>SM</sup>), using our proprietary Titan<sup>SM</sup> monitoring platform built on a fully redundant infrastructure, will enhance your security solution by monitoring the data from your critical information security assets, eliminating the haystack of information, and increasing the stability and security of your environment to thwart known and unknown threats in real-time.

Our Security Engineers will specifically seek out events such as:

- ▶ Slow attacks (a port scan/vulnerability scan performed over days/weeks)
- ▶ Attacks to critical IT resources (this can be customized and tuned according to your business needs)
- ▶ Multi geographic attacks directed at a specific resource
- ▶ Denial of Service attacks

This service can be combined with our other P4secure<sup>SM</sup> services to provide an optimal level of protection and peace of mind.

## Service Benefits

Businesses have migrated many of their mission critical systems and applications to new support models that allow companies to selectively outsource functions like security solutions that enable:

- ▶ A Fully Managed Solution with lower total cost of ownership
- ▶ Predictable budgetary operational costs following a fixed monthly recurring fee structure with no capital expenditure resulting in potential immediate ROI
- ▶ 24/7 monitoring and Global Security Operations Center support by specialized IT experts eases pressure on existing staff
- ▶ Dedicated industry experienced professionals solely focused on meeting your demanding business needs allowing you to focus on strategic business objectives
- ▶ Achieve regulatory compliance with third party audit

The challenge to your business is clear. How can you ensure your mission critical business systems are available when you need them? P4 has the combination of geographically diverse data centers, powerful management tools, and a world-class IP network to support highly available and secure business systems. P4's skilled resources using proven methodologies enable your organization to have confidence that your systems, applications and databases will keep your business out of risk.
