Our dedicated hosting solutions provide a comprehensive mix of protection, performance and freedom your growing business needs. Our Dell powered application hosting platforms range from single servers to multiple servers, in highly customized configurations ready for ultra-fast deployment, all backed by our 24/7 customer support, and industry-leading SLA's. Our cost-effective dedicated hosting packages offer you a solution that meets your security, data protection, privacy, compliance and stability needs, while ensuring ease-of-scalability for future growth. Our 24/7 support offers reliability and performance through our robust network and state-of-the-art monitoring.

Dedicated Hosting Solutions

P4 Performance Management has a solution for customers who want scalable dedicated application hosting with 24/7 monitoring and support. Utilizing our P4solveSM service, P4 provides a suite of highly customizable, robust server solutions incorporating 24/7 monitoring and management. Our solutions offer cost-effective packages designed to deliver high performance, secure application hosting on built on award winning technology. Our team of certified Solutions Engineers will work with you to determine your hosting requirements and customize a solution to fit your business needs while ensuring ease-of-scalability for future growth.

P4's dedicated hosting solutions include the provision, installation, monitoring and management of dedicated Dell powered server solutions. Each solution is designed to offer the maximum security, stability and performance whilst providing the flexibility to grow with your business. High Availability and data protection are provided through the use of robust networks and RAID technologies. Options for increased robustness include High-Availability firewalls and switches supporting bonded network interfaces, load balancing, and clustering.

P4's dedicated hosting solutions include 24/7 monitoring by our Global Enterprise Management Center (GEMCSM) using our proprietary TitanSM monitoring platform. Customers can access real time incident and performance information through our P4|VuSM web portal and dashboard.

P4 also provides advanced consulting services such as gap analysis, security assessment services, and capacity planning for future growth to meet changing business needs.

Service Options

Why P4solveSM Managed Storage & Backups?

Businesses have migrated many of their mission critical applications to new support models that allow companies to selectively outsource business functions such as web hosting. P4's dedicated hosting solutions offer:

- ▶ A fully managed solution with lower total cost of ownership
- ▶ Predictable budgetary operational costs following a fixed monthly recurring fee structure with no capital expenditure resulting in potential immediate ROI
- ▶ 24/7 monitoring and Global Enterprise Management Center support by specialized IT experts eases pressure on existing staff
- ▶ Dedicated industry experienced professionals solely focused on meeting your demanding business needs allowing you to focus on strategic business objectives
- ▶ Achieve regulatory compliance with third party audit

The challenge to your business is clear. How can you ensure your mission critical business systems are available when you need them? P4 has the combination of geographically diverse data centers, powerful management tools, and a world-class IP network to support highly available and secure business systems. P4's skilled resources using proven methodologies enable your organization to have confidence that your systems, applications and databases will keep your business out of risk.
